

ElectroRegenesis Health Technology

Regenerate your future

ElectroRegeneration – A Proven Bioenergetic Solution

ElectroRegeneration (ER) technology is based upon the premise that the human body is essentially a highly complex, constantly transforming, and fully integrated energy system, not merely an anatomic structure subject only to the laws of mechanics and chemistry.

ER technology adapts an ordinary electric charge into a bio-active pulse of vital energy that is compatible with the living organic energy of the human body.

ElectroRegeneration devices take effect immediately at the cellular level, without depending on the digestive and circulatory systems for delivery, eliminating the dangerous side effects

of toxic drugs and invasive surgical procedures.

Effects on the body ElectroRegeneration therapy acts as an antioxidant

The device produces a steady stream of electrons at a relatively low, but constant, concentration. Stress on the body results in the formation of toxins called free radicals. These free radicals have the ability to scavenge electrons from biological molecules such as DNA and thus cause mutations that can lead to diseases. This device has the ability to donate electrons to neutralize free radicals protecting the body from the harm of stress.

Electroregeneration and the mitochondria

The cells mitochondria are very susceptible to free radical damage. The steady stream of electrons not only protects the mitochondria from the free radical damage, but also enhances the glycolysis process via the electron transport chain. This optimizes ATP production, maximizing cellular energy.

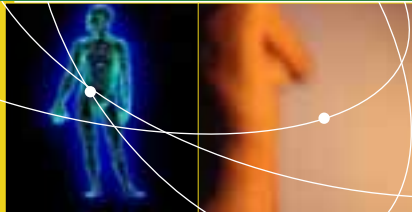

The human body runs on energy much the same as any electrical system.

Each cell in our body is a miniature battery, which requires recharging from time to time.

ElectroRegeneration therapy charging cell batteries

The human body runs on energy much the same as any electrical system. There are about 75 trillion cells in a human body, each having an electrical potential across its cell wall membrane, similar to a battery. Each cell in our body is a miniature battery, which requires recharging from time to time.

ElectroRegeneration technology restores the full electrical potential across the cell wall, thus charging up the cell's miniature battery.

ElectroRegeneration therapy and circulation

Without adequate circulation of fresh blood, toxins and metabolic wastes in diseased organs and damaged tissues accumulate and cannot be cleared, new supplies of nutrients and oxygen cannot be delivered, cellular regeneration becomes impossible, and tissue deterioration continues.

ER therapy opens up free circulation of blood to all the internal organs and bodily tissues, particularly in areas that have been chronically deprived of sufficient blood supply due to congestion, inflammation, lesions, infections, and other pathological conditions that inhibit blood circulation.

When energy flow is enhanced, better blood circulation occurs immediately.

Results found with the ElectroRegeneration technology include;

- Reduction of inflammation and swelling
- Reduction and elimination of chronic and acute pain
- Stimulation of lymphatic clearance
- Re-epithelialization of wounds
- Increased circulation and energy
- Normalisation of cellular energy production and function (ATP)

How ElectroRegenesis Therapy differs from other electrical healing devices

Electroregeneration technology produces a waveform which moves electrons through the body at a frequency and current output lower than any other device currently on the market.

Unlike other electronic medical devices, which jolt the nerves and tissues with bolts of electricity, ER technology generates a gentle pulsating stream of electrons that flow smoothly through the body's internal energy network. Like water gliding slowly through a field of irrigation channels, the energy flow gradually permeates every tissue and saturates every cell with the healing energy and regenerative power of electrons.

This device has the ability to donate electrons to neutralize free radicals protecting the body from the harm of stress.

The ER devices are curative, compared to other electronic devices which are palliative.

The Evidence

The devices have been shown in international clinical studies to have the ability to stimulate regeneration of new tissue as well as producing antioxidant and anti-aging effects. When tissue regeneration occurs on the cellular level, healing occurs in every aspect of the body. Clinical studies conducted in the U.S., Mexico, and Australasia can be viewed at; www.electroregeneration.com.au

Testimonial

Stan Kruder of S.A. had shattered his ankle. Due to the excruciating pain he was told he'd need 3 months on crutches and pain killers. Yet after only 3 weeks of ElectroRegenesiis treatments, he was walking normally again, without crutches, without pain, and without drugs. "I've never seen such an amazing recovery from a fractured ankle, the absence of swelling is particularly remarkable." Dr. Zac Baran, Adelaide, S.A.

The bodihealth device is designed to treat everything from the simplest to the most severe conditions in human pathology.

BodiHealth Device

The Bodihealth device is a non invasive, therapeutic device that delivers ultra-low energy compatible with the natural electric currents of the human body, correcting any imbalance that is present.

The Bodihealth device delivers a direct current ranging from 100 nanoamperes (10^{-9}) to 3 milliamperes (10^{-3}). The bodihealth device is a therapeutic tool used by practitioners in their surgery delivering a more powerful energy in a short space of time.

The JAI

The JAI is a small personal device. The JAI delivers a more subtle ultra-low energy non-invasively, balancing the body's energy systems.

The JAI delivers a direct current at the same ultra-low levels at which the healthy body normally functions. The currents range from 100 attoamperes (10^{-18}) up to 1200 nanoamperes (10^{-9}). This range of currents gives the option for the practitioner to treat a patient totally holistically at a mind, body, soul, and source level.

The JAI compliments the Bodihealth allowing the patient to continue the healing process while they go about their daily lives.

Testimonial

"I treated conditions such as dysmenorrheal (painful periods) with immediate pain relief within a few minutes of commencing treatment; menopausal conditions with adrenal exhaustion improved quickly; shoulder and neck pains that had plagued some patients for years disappeared after a few treatments; the pain of severe osteoarthritis of the hips was relieved to such a degree that the patient's depression lifted and she was able to take a holiday in Europe for three weeks; improvement in respiratory infections with reduction of fever and disappearance of pain within the first 25 minutes of treatment; chronic wound ulcers improving; and even cancer patients who noticed improved energy and well-being. I am very pleased to have access to such a valuable tool for healing and re-energizing difficult-to-treat patients in such rapid time."

Dr. Dzung Price, Broadbeach, QLD.

ElectroRegenes Wellness Centre

Nestled in the heart of Queensland on Tamborine Mountain, the ElectroRegenes Wellness Centre offers natural as well as traditional medical services utilising the non-invasive ElectroRegenes therapy devices. A fully licensed Medical Director and Registered Nurse head our qualified staff that specializes in:

- Treating all chronic health conditions
- Pain relief and massage therapy
- Lymphatic health and wound care
- Cranio Sacral therapy
- Natural and nutritional health care

The Centre also functions as a training centre and model for health care professionals from all over the world who are incorporating ElectroRegenes technology into their practices.

All healthcare professionals are invited to spend time at the clinic to receive free training in the use of ER technology, and learn how they can incorporate ER technology into their practices.
